

CORPORATE OVERVIEW

July, 08 Page 1 of 2

Target Products Limited (incorporated in 1961) is a wholly-owned subsidiary of the QUIKRETE® Companies (effective February 2008). The company employs over 100 people. The corporate sales office is in Burnaby and the state of the art production facility completed the relocation to their aggregate screening and drying plant in Abbotsford in 2006. Target also operates plants in Calgary, Morinville, Saskatoon and Olympia WA. Other subsidiaries include a synthetic sports field division Target Technologies Inc., an equipment design and manufacturing division Forge Industrial Engineering and a materials' handling division, Team Mixing Technologies Inc., all located in the Greater Vancouver area.

The company's original product line was based on the manufacturing and packaging of cementitious mixes primarily for lumberyards and do-it-yourself box stores. These products provide customers with convenient, quality products for small projects. Over time expansion of their product line included packaged materials that are tailored to the industrial market. These include grouts and floor levelers.

The company's sand division distributes a variety of blasting and filter sands. Besides supplying the Burnaby plant with dry aggregates, the Aldergrove plant produces some of the company's sand products such as engine sand and forestry grit.

The golf course and sports field division produces and distributes topdressing and bunker sands, fairway mixes and greens mixes. Target owns soil blenders equipped with testing equipment and laboratories for blending different soils for the golf course industry. The company has supplied golf courses in Hawaii, Bermuda, Washington, Alberta and British Columbia.

In the mid 1980's, Target expanded into the Alberta market with the acquisition of a plant in Calgary. This plant manufactures cementitious products for the Alberta retail market. The plant also produces shotcrete and distributes various blasting products and concrete additives such as silica fume and silica flour.

In 1994 Target purchased a sand drying and screening facility located just outside Edmonton in Morinville, Alberta. Target continues to distribute different blasting media and now processes its own silica sand. Target's sand is used in a variety of industries such as: sandblasting, filtration, fluid bed power generation, tile grouts, paving joints, and poultry grit.

A successful joint venture was formed in 1996 in Seattle, Washington. Mutual Target LLC combines Target's ability to build plants and design bag mixes with Mutual Material's ability to sell to lumberyards and masonry contractors.

Target's technical expertise as Western Canada's leading shotcrete supplier to the Mining Industry combined with the tradition of Cindercrete Products in Saskatchewan led (in 1997) to the creation of Cindercrete Mining Supplies, a company dedicated to supplying the Saskatchewan market with shotcrete, grouts, shotcrete equipment and sandblasting materials.

CORPORATE OVERVIEW

July, 08 Page 2 of 2

With plants serving Western Canada and the USA Target also has representatives in South America and the Pacific Rim.

Target Technologies International Inc (TTII) was incorporated early in 2002 as a new division of the Target Products Group of Companies. TTII is a virtual sales and marketing company offering quality products and supply chain management logistics services. TTII acts as a procurement agent, representing both vendors and buyers. One of its niche markets is the running track and artificial sports field industry. Products supplied into these markets include: Ambient & Cryogenic Crumb Rubber (recycled car/truck tires refined down into a specified granule size); EPDM Rubber; TPV Granules; Silica Sand; Gravel; Road Tech 2000 (an environmentally responsible, natural road and sports field base stabilizer); TurfAide™ (an anti-microbial product for artificial turf); and more. TTII sources and delivers quality products across North America, Central America, South America and world-wide – on time!
www.TTIIOnline.com

In 2002, the company created Forge Industrial Engineering., a division with several engineers and a focus to provide both engineering design support to the Target Group of Companies and out side firms interested in equipment and engineering design in the aggregate and bulk powder discipline.

In August 2003, the material handling division of Thiessen Team merged with Target Products Ltd creating a new company Team Mixing Technologies Inc. The merger allowed for the integration of Thiessen Team's line of fully automated material handling systems into Target's offerings.

The company has a policy of doing work in house. This policy encompasses everything from equipment design and fabrication, to mix design and product development. This experience and knowledge base has provided the means for the company's expansion. Although the Calgary and Edmonton plants were purchased out of receivership, Target's equipment knowledge, production know-how, and business base has turned both Alberta operations into profitable ventures. Joint venture partners are attracted to Target for the same reason.

Target employees understand the long-term strategy of the company. This long-term strategy builds quality into all aspects of the organization. When designing, building, or purchasing equipment, the company looks at a long-term picture. This means quality equipment that serves the needs of the company into the future. The company also tries to build long-term relationships with customers. This means quality products at competitive prices. Finally, Target strives to build long-term relationships with suppliers by seeking quality products and excellent service at competitive prices.

YOUR PARTNER IN QUALITY

TARGET is a registered trade-mark of Tegrat Holdings Ltd. Target Products Ltd. is an authorized licensee.
